

ColorFactory 6.0

– Cost efficient and time saving

- Improved quality – automatically
- Full colour control
- Automated workflow
- Integrates with your editorial system
- Automate repetitive production tasks

Automatic Repro

– Cost efficient and time saving

In a production environment with the deadline constantly looming above, time is of the essence. FotoWare applications are made to manage your digital assets and have been designed with automation in mind. Time-saving automation of file flow, conversion between formats, and not least, colour reproduction consistency using ICC profiles make a FotoWare system the obvious choice for anyone working with large volumes and a tight schedule.

Need to get a batch of images ready for print?

A FotoWare system will be with you every step of the process. File reception, sorting, application of metadata to prepare them for archiving, cropping, resampling, colour correction and conversion to CMYK – FotoWare does the lot. Automatically. Color Factory uses industry-standard solutions such as ICC.

Every aspect of the production process can be fine-tuned, and you can handle images that require special attention manually. A Color Factory server can even filter out those files for you, allowing you to give them proper attention.
